Search Notes

Dear Examiner Porter:

Please find attached the results of your search for the above-referenced case. The search was conducted in the template files, plus some education-related files.

I would have listed references of *potential* interest in the first part of the search results, if there had been any. However, please be sure to scan through the entire report. There may be references that you might find useful which I missed.

If you have any questions about the search, or need a refocus, please do not hesitate to contact me.

Thank you for using the EIC, and we look forward to your next search!

Caryn S. Wesner-Early, MSLS
ASRC Technical Information Specialist
EIC 3600, US Patent & Trademark Office

Alerting Abstract ...completed task is compared with previously planned task and if there is any deviation, the lesson plan is edited. A variety of complimentary reports is obtained with data stored in database and printout are taken for any report.
DETAILED DESCRIPTION - The school information includes holidays, non-teaching days and the students information includes students medical data and about guardian informations. The datas are imported and exported to and from another computer...
...USE - For creating, editing and producing of classroom specific and non-specific lesson plans in education field...

...ADVANTAGE - Gives the teacher a flexibility of planning an entire school year lesson plan. Reduces amount of lesson plan work the teacher would have to perform manually. Eliminates use of writing tools and also saves teachers time. Importing and exporting routines support archiving data for historical references. DESCRIPTION OF DRAWING(S) - The figure illustrates data flow for final preparation of lesson plan report.

Claims:

...and required class curriculum, and student information to include each students medical data and guardian,(b) developing a lesson plan for each class by:(i) selecting a length of a teaching period or the starting and ending date of the teaching period,(ii) identifying one or more texts to be used, the number of pages in a text or the number of pages to be taught, one or more teaching tasks to be taught in the teaching period, any required or suggested materials to be used in the teaching task, the methodology to be used in the teaching task, projected objectives, and an evaluation to determine the success of the teaching task, and(iii) allocating text pages and tasks to teaching days in the identified period;(c) periodically editing by storing actual progress allowing the computer to compare the actual progress to the lesson plan and to correct for any deviation from the lesson plan by modifying the lesson plan by reallocating the pages and tasks;(d) transferring information associated with one or more specific students to a second database for forming student rosters(e) storing a template that is prepared and formatted for each of the required reports; and...

ABSTRACT

... To provide a method suitable for avoiding adverse effects on other related DB and a data transition program, when editing of DB

structure and data transition program structure.

SOLUTION: An editing instruction is inputted to structural information about the data base and structural information about the data transition program between data bases, influences on the structure of other data base and the data transition program between the data bases in the case of editing the structural information according to the instruction are checked, notified and the presence/absence of establishing intention of the editing instruction is inputted. When the establishing intention of the inputted editing instruction exists, the editing instruction is reflected on the structural information and when other editing instruction is inputted, a processing from an editing instruction input processing of the acquired structural information to reflection of the editing instruction on the structural information is repeated. When no other editing instructions are inputted, the edited structural information is reflected on the data base and the data base transition program.

This article describes a proposed model for a case management certificate program in Canada. It provides information on the Canadian context within which case management is being developed, and information on the proposed program model. Targeted to case managers, the program is to be offered by a university continuing education division. The article describes the developmental process, students' learning objectives, course content areas, university certificate requirements, and program structure and organization. Further the program model is discussed with reference to flexibility and responsiveness to individual student and employer needs.

... the nurse provide a high level of care in meeting the knowledge needs of the patient. It is not necessary, or even desirable, to develop a plan for each individual patient...

... information for each type of ophthalmic surgical procedure provides a means of assuring that the teaching plan is complete and accurate. The information in the teaching plan should be validated by

other physician and nurse colleagues. A written plan can save time once it is developed, because the nurse can follow the standard plan, modifying the presentation to meet each patient's specific needs as necessary. The patient indicated feeling somewhat overwhelmed with information when faced with his ophthalmic surgery. It is very important to ensure that the patient and appropriate significant others get both verbal and written information in these situations. The written information gives the patient and his or her family a reference to use when they return home and begin to assimilate more of the information given to them by the nurse. The patient in this case history and his wife both referred to the written instructions several times before and after the operation to verify certain information. The written materials presented information at an appropriate reading level and had large well-spaced print. Repetition (whether verbal or in written format) is important because it reinforces important aspects of the necessary information. The nurse at the surgical facility repeated the postoperative requirements to the patient and his wife before they left the center and made sure that they had the written instructions as well. The nurse demonstrated the necessary motor skills and gave the patient and his wife the opportunity to return the demonstration.

...ABSTRACT: the participants at the 1949 Boulder Conference on training in clinical psychology) from the Boulder-model program (that is, the actual program of education which materialized), we would have to agree with Raimy who in 1984 suggest that the...

...hoped would materialize) has never been actualized. The philosophy of the Boulder program was that clinical work in psychology should be based on scientific data and that the clinical psychologist should be expected to do research to contribute to the corpus ideas in clinical psychology. In Frank's recent essays the training of the clinical psychologist for research was discussed; in this essay, the degree to which clinical training is based on scientific data and the data of basic psychology is discussed. The conclusion is drawn that the foundation of clinical work by psychologist is not basic psychology. The influence of this observation on clinical training was discussed and recommendation made to modify the current clinical programs so that the Boulder philosophy might actually be actualized.

Abstract: In order to improve the assessment and management of depression in general medical care, the John D. and Catherine T. MacArthur Foundation supported the development, evaluation, and dissemination...

...depression education program (DEP) for primary care physicians. This publication includes a paper describing the background and educational rationale for the program structure, the complete participant's workbook, and a facilitator's guide for teaching the program. Given in two separate four-hour workshops by a psychiatrist and a primary care physician, DEP is delivered to small groups of learners (about 12) using an interactive adult learning model and multiple teaching techniques including targeted yet flexible objectives, two lectures, videotape demonstration and discussion, role-play exercises, a focused monograph on depression, an interview checklist, structured assessment and outcomes tools, clinical case studies, and audiotape review of actual patient interviews. DEP has been shown in a prospective...

... Summary

Our program plan for patient education is based on adult learning principles, developed through experience, guided by clinical pathways, and tailored to each individual patient and family. Over the years, we have developed many educational tools and creative ways to overcome many educational challenges. The goal of our teaching tools is to provide concrete and objective information to help patients through the hospital phase to lifelong positive behaviors post-transplantation. Although there are similar themes in transplantation, each patient comes with his or her own story. Therefore, time for sharing concerns and using a...

ABSTRACT: A guide to creating computer-based training (CBT) applications is presented. CBT uses interactive sessions to offer practice exercises and tests with...

...life situations and drills that improve problem-solving skills. Other requirements include context sensitivity and information conductivity. Trainees can learn in a non-threatening but structured environment while taking less time off from work and focusing only on the information they need. Curriculum and pace can also be tailored to the individual user. Software simulations...

...frames. The main steps in creating a CBT program are defining the project, designing a lesson plan, developing a script, writing code, evaluating the program through a small-scale test and implementing...

IV. Additional Resources Searched
